Contractor or Agent Signature

Dear Homeowners:

New Jersey law requires that any existing dwelling that contains a fuel-burning appliance now be equipped with a Carbon Monoxide Detector. The law requires that homes which contain equipment such as a gas fired kitchen range/oven, gas or coal fired furnace or boiler, gas fired water heater, gas fired space heater, wood stove, or wood/gas burning fireplace or any other appliance that produces Carbon Monoxide (CO) gas or has a attached garage be in compliance with the law.

Newly built homes or homes that undergo a repair, renovation, alteration, or an addition or install any equipment that requires a permit must be in compliance with the law.

No additional permits are required for the (CO) detector(s) unless you choose to install hard-wired type detectors.
